1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1,3-6, 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over 2002-218793 in view of 08-289406 both cited by applicant.

2002-218793 discloses power output apparatus comprising first inverter; second inverter; 2Y motor having first three phase motor coil and second three phase motor coil functioning as stators, energization of first and second three phase motor coils being controlled respectively by first and second inverter; a power supply connected between first neutral point of first three phase motor coil and second natural point of said second three phase motor coil and motor connected with 2& motor for at least one of supplying and receiving power there between ,see #22 and 24, 25, #40, #30, and #32. 2002-218793 lacks disclosing 2Y motor generates power from force from an internal combustion engine and starts internal combustion engine. 08-289406 discloses motor generates power from internal engine and stars internal combustion engine; see #26, 20A, and #10. It would have been obvious to one of ordinary skill in the art to combine the power output apparatus of 2002-218793 with engine of 08-289406 for improved control.

3. Claims 7-12 are allowed.
